

## Water Treatment

Water resources are essential for human beings and significant to many sectors of the life and economy. The growth in urbanization, population growth together with industrialization and the development of irrigation are increasing the demand for water. The desired improvement in water quality means that increasingly effective products will have to be used.

SINOFLOC range of flocculants and coagulants covers all global market requirements and suit for all types of treatment:

- Municipal Wastewater Treatment
- Industrial Wastewater Treatment
- Sludge Thickening and Sludge Dewatering
- Sewage Treatment

### Municipal Wastewater Treatment

There is an increasing demand for the municipal wastewater treatment in recent years. [SINOFLOC](http://www.sinofloc.com) understand customers' requirements and our team is always committed to innovate more efficient and environmentally products. SINOFLOC could supply the flocculants and coagulants to be used in municipal wastewater treatment and provide efficient, economical solutions to meet customer's specific and strict wastewater treatment requirements.

## **Industrial Wastewater Treatment**

The principal target of industrial wastewater treatment is to allow industrial wastewater to be disposed of without danger to human health or unacceptable damage to the environment. SINOFLOC range of flocculants could be used in conjunction with inorganic coagulants in the industrial wastewater treatment including paper, textile, and food industry and produced water from the oil industry.

## **Sludge Thickening and Sludge Dewatering**

SINOFLOC polymers are the effective sedimentation and centrifugation flocculants in the treatment of sludge thickening and sludge dewatering. They could be used in partially or fully digested or activated or chemically treated waste sludge from the paper, chemical, textiles, municipal wastewater, and oil industries. It is suitable for the centrifugal, screw, belt and frame machines.

## **Sewage Treatment**

Sewage treatment is the process of removing contaminants from wastewater from household or factories. SINOFLOC range of flocculants and coagulants could be used in the chemical process in sewage treatment to remove these contaminants and produce environmentally safe treated wastewater. SINOFLOC flocculants are also effective as a settlement aid in the treatment of the primary sewage after conditioning with an inorganic coagulant.
